

reducing risk so you can get back to patients

Healthcare facilities have enough to worry about without adding complex security systems to the mix.

Hospital staff must respond quickly to emergencies as a matter of life and death. Physical security issues can't get in the way of that, which is why taking a unified approach is the best way to secure these facilities. Arcules provides healthcare facilities of all sizes with the tools they need to protect everything from large facilities to remote, satellite offices — all from a single cost-effective and intuitive platform.

overcome obstacles in healthcare

supply & medicine loss

Monitor high-theft areas with video surveillance layered with powerful cloud-based analytics to protect medicine cabinets, PPE supply room and staff lockers.

patient & staff safety

Set advanced motion detection analytics to monitor critical areas after hours, like parking garages and lots to ensure the highest levels of safety.

medical equipment theft

Strengthen theft investigations using synchronized playback or search for specific objects using the forensic video search. Quickly document and share results with case management.

cyber security threats

Arcules cloud platform utilizes the latest technology in security and threat prevention backed by Google Cloud technology. Data encryption enforced at all vulnerable points.

ongoing maintenance costs

Remote management drastically reduces the need to visit on-site facilities with software that's always up-to-date via the cloud.

waiting room utilization

With people-counting and heat map analytics, you can monitor where people are spending their time in common areas to optimize space usage in patient waiting rooms.

access verification

Access control, video and analytics come together so you can use video verification on doors or access areas for the most cohesive approach.

unify multiple sites

Connect multiple practices, clinics, and facility sites together while being able to scale using remote setup across locations in days (not months).

easy to learn & use

Put video surveillance in the hands of staff with minimal training. From any browser or the Arcules mobile app, local or remote.

how arcules helps

Arcules empowers healthcare facilities to easily deploy and manage video surveillance across locations while proactively avoiding potential incidents, rather than reacting after the fact.

easy to use

Intuitive user interface with zero training required. Map and floor plan views for easy camera access.

scale fast

Quickly deploy in days, not weeks. Manage across all your medical offices and locations.

secure

Enterprise-grade security, low latency, and global backup to prevent data loss.

low investment

No need to buy and maintain expensive servers. Works with 6000+ cameras so you can use existing infrastructure.

intelligent data

People & vehicle counting and heat maps improve security and increase operational efficiency.

access control

Automatically integrate access control with the incoming video data to enable access-based video verification.
