

reducing loss so you can get back to selling

Arcules helps retail operators reduce loss, improve store safety, and utilize smart analytics to improve operations.

Arcules is the ideal cloud-based security solution for retailers of all sizes. From a single site, low camera count location, scaling up to multi-site operations with thousands of cameras, Monitor storefront and warehouse locations from anywhere, and leverage built-in analytics to improve security and gain retail insights. Arcules delivers powerful security in an easy-to-use and cost-effective service.

overcome obstacles in retail

theft incidents

See what was happening on all cameras at the time of theft using synchronized playback or search for specific objects using the forensic video search. Case management helps you easily package up video evidence for the authorities.

retail shrinkage

Monitor staff and customer activity in transaction and inventory areas. Video surveillance and access control reduces opportunity and temptation.

store awareness

Retail operators need to be aware of people moving throughout the store or warehouse. Arcules video analytics turn your cameras into smart detection devices 24/7, 365.

customer traffic

With people counting and heat-map analytics, you can monitor where customers are spending their time. Improve layouts, end-cap displays, and daypart sales optimizations.

access control

Limit access to cash, inventory and office areas with integrated access control. Verify door activity with video playback.

vehicle & people detection

Send alerts to store managers or employees when a vehicle parks in the lot or a person enters the store. Never lose a potential sales opportunity again.

easy to learn & use

Put video surveillance in the hands of staff with little to no training. Empower your associates to make decisions based on real-time information.

open device platform

Arcules' open platform supports thousands of IP camera models, allowing you to keep existing ones, or install the latest technology for your exact needs.

cyber security threats

Protected by cutting-edge threat detection and backed by Google Cloud technology. Data encryption is enforced at all vulnerable points.

how arcules helps

Arcules enables retail operators to manage security across locations, and gain important insights that empower them to improve business operations.

easy to use

Intuitive user interface with zero training required. Map and floor plan views for easy camera access.

scale fast

Quickly deploy in days, not weeks. Manage across all your retail locations.

secure

Enterprise-grade security, low latency, and global backup to prevent data loss.

low investment

No need to buy and maintain expensive servers. Works with 6000+ cameras so you can use existing infrastructure

intelligent data

People & vehicle counting and heat maps improve security and increase operational efficiency.

access control

Automatically integrate access control with the incoming video data to enable access-based video verification.
