

# Strengthen Your Security. Simplify Your Operation.

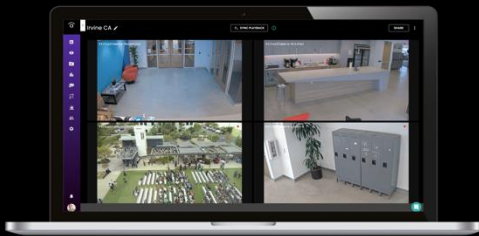

Video Surveillance in the Cloud

For enterprises that need to manage security at multiple locations, the complexity — not to mention cost — of buying and managing on-premises solutions can be overwhelming. And legacy systems frequently cannot share data or be accessed remotely, making centralized management impossible.

As the only truly open cloud-based software service, Arcules is built to efficiently manage multi-site video surveillance on a massive scale — using your existing cameras and sensors.

## Monitor and control multiple sites from a single web interface

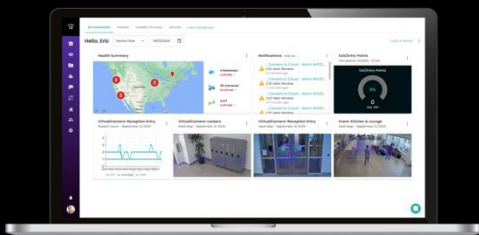

- Enterprise-grade video management, AI, automation
- Connect existing cameras and devices at multiple sites
- SOC 2 Type II, HIPAA, GDPR protections
- Flexible subscription model, upgrades included

1

### Steadfast Video Surveillance – See, Search & Share

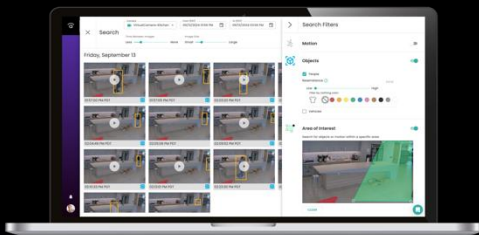

- View live video, recorded playback, export and snapshots
- Connect existing cameras, devices at multiple sites
- Manage and document incidents with just a few clicks
- Mobile viewing and playback allows viewing of any device, anytime, anywhere
- Automated alerts and notifications help your team focus

2

### Central IT Control – Operate Everywhere. Manage Anywhere.

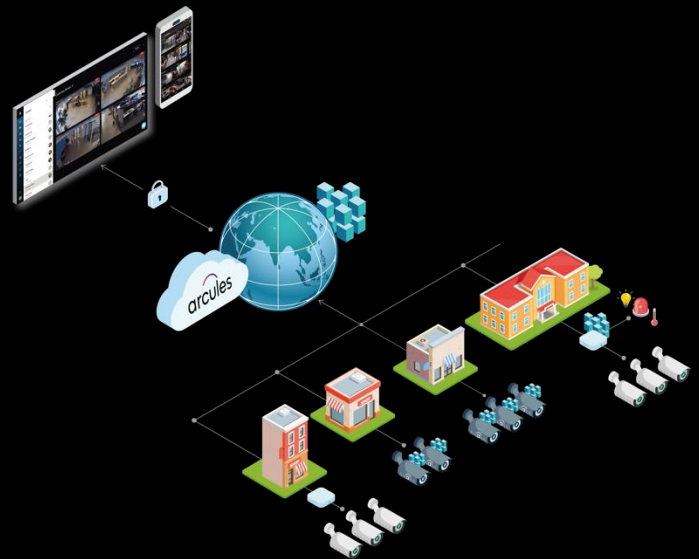

- Cloud-based platform provides secure, centralized management
- Automatic updates, upgrades; device health monitoring
  - SOC 2 Type II compliant, plus:
  - Multi-Factor Authentication
  - RBAC, SAML / SSO
  - HIPAA
  - GDPR
  - NDAA, TAA

3

### Next Gen AI – Analyze vast amounts of data across all devices

- Situational awareness with real-time monitoring and AI powered analytics.
- AI-powered analytics provide powerful monitoring and insights
- Smart search through hours of video footage in seconds
- Generate heat maps, count people, detect vehicles, verify door access

- 1 Choose Pure Cloud, Edge, or Mix & Match**
- Built on Google Cloud for security, scalability, low latency
  - Storage options for low bandwidth & high redundancy
  - Integrate with existing XProtect on-prem
  - Mix-and-match for the best of both worlds

- 2 Support for 20,000+ ONVIF Cameras**  
Choose the right cameras for your needs today and in the future.

- Day/Night
- Wireless
- 4/5 MP
- IR/HDR
- Ruggedized
- Multi-sensor
- PTZ

- 3 Extensive IOT Integrations**
- Access Control
  - Camera Analytics
  - Environmental Sensors

## Getting Started

Compared to deploying an on-premises solution – with a server, operating system, and device drivers—setup of Arcules is simple. Adding a new site takes minutes. The only required on-site task is to plug in the Gateway (not necessary for Camera-to-Cloud cameras). Your cameras will connect automatically to the Arcules cloud using pre-installed drivers. You can adjust settings and configuration remotely any time. And a unified cloud platform means that just one Arcules instance is necessary for all your sites.

Looking for help?

Here's a model rollout timeline:

- Day 1**  
Install gateway. Configure system, analytics, rules, users.
- Day 2**  
Monitor system performance.
- Day 3**  
Trial KPIs met. Full roll-out at first site.

At Arcules we work with some of the largest integrators in the world and have successfully deployed systems in the most challenging environments.
