# the fastest, least disruptive path to cloud surveillance.

Arcules is the simplest cloud security solution that delivers video surveillance, access control, and smart analytics in one open platform. Keep your existing infrastructure while minimizing costs and maintenance.

hardware? aren't you a cloud company?

Yep! The Arcules platform lives in the cloud and manages your data remotely, so we use a small internet appliance called the Arcules Gateway to keep things simple and connected. The Gateway bridges all of your devices together and securely communicates the data to our cloud platform so you can manage your system from anywhere, any time.
