arcules

functionality meets scalability

## arcules plug-in for milestone xprotect

arcules cloud vsaas integrated with milestone xprotect

Combine the versatility and flexibility of Video Surveillance as a Service (VSaaS) with the powerful functionality of an on-premises VMS securely and efficiently with the Arcules Plugin for Milestone XProtect. The solution provides users of XProtect systems with access to live video, recording playback, and alarms across cameras connected on-premises with cameras connected via the Arcules cloud platform.

Reduced local hardware and shorter deployment times make this solution ideal for organizations seeking to expand their operations quickly and efficiently across geographically dispersed locations. Because Arcules is built on the Google Cloud Platform, organizations enjoy enterprise-grade infrastructure, low latency, robust encryption and redundant global backups to guard against failure - all in a flexible VSaaS model.

arcules xprotect solution features

- Authenticated access to Arcules VSaaS cloud from XProtect Corporate using Milestone Interconnect™

- Navigate and view Arcules camera groups by site or location within XProtect

- Populated video timeline to help operators in the XProtect system navigate and playback recordings kept in the Arcules cloud service

- Ability to create and sync alarms in XProtect

- Utilization of the Milestone Centralized Search function to find video sequences based on recording events and alarms

arcules | milestone

benefits of the arcules plugin for milestone xprotect

Designed for existing XProtect Corporate users, as well as organizaions requiring a flexible and feature-rich hybrid solution, the Arcules XProtect solution provides...

rich features

- Powerful features combined in one solution, including maximum camera choice

- Flexibility in when and how you deploy across locations

- Connect your system to the services your business needs

- Low latency, robust encryption, and redundant global backups to guard against failure
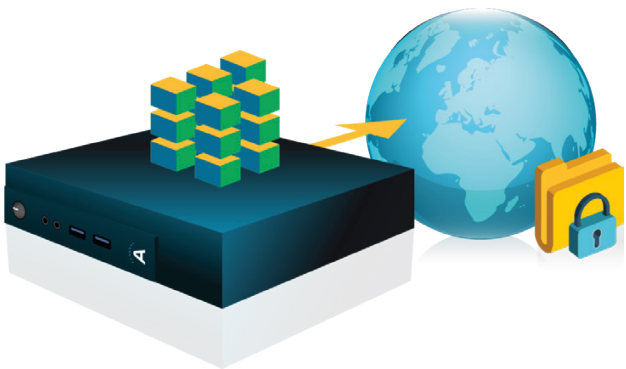

easy deployment

- Set up, configure and remotely maintain distributed sites quickly

- Eliminate the need for expensive hardware at dispersed sites

- Intuitive user interface streamlines deployment and eliminates time-intensive user training

reduced investment

- Reduce capital expense and have better control over operational costs with flexible VSaaS licensing

- No need for expensive server hardware at each location

- Automatic updates, low maintenance, and zero downtime with Arcules cloud services

the arcules cloud gateway

The Arcules Gateway is a small appliance that acts as a simple connector for aggregating and securely pushing your local security system data to the cloud. Gateways are used in smaller, remote locations for the Arcules XProtect Solution.

benefits & features

Plug-n-play appliance offers fast setup and configuration

Save time and stay safe with continuous automatic updates

Securely encrypts all data uploaded to the cloud

Multiple Gateway options available for unique door and channel requirements at each site
